

STEP 0: ANALYSE PROBLEM STATEMENT

BrightTV's CEO has an objective to grow the company's subscription base for the financial year. He has approached you to provide insights that would assist CMO's Customer Value Management team in meeting this year's objectives.

The dataset attached contains information on the user profiles and viewer transactions for BrightTV.

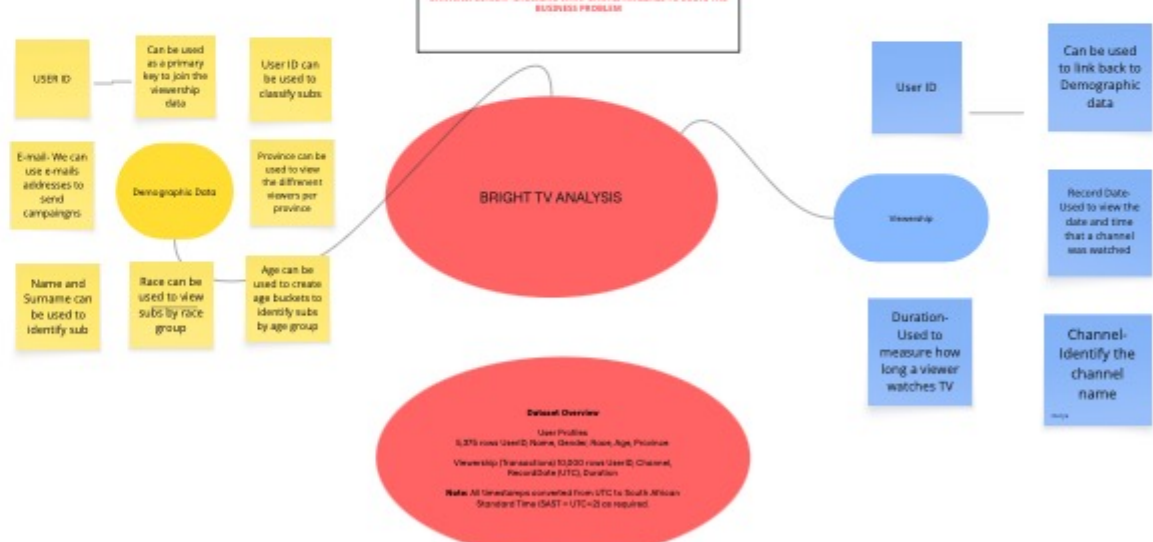

Please prepare a 20 min presentation covering the following topics:

- Provide insights on user and usage trends of BrightTV.
- What type of factors influence consumption?
- What content would you recommend to increase consumption on the days with low consumption?
- What type of initiatives would you recommend to further grow BrightTV's user base?
- Times and dates in this dataset are registered in UTC and should be converted to SA time.
- Consumption is split per session, i.e. for every session a subscriber has, there will be 1 record.
- Any additional data that may assist in the presentation is welcomed.

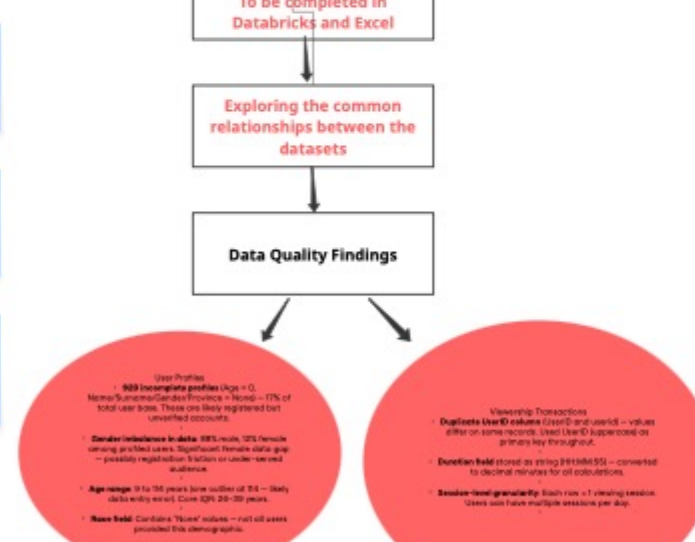

STEP 1: ASK DATA DRIVEN QUESTIONS

STEP 3: ANALYSIS PLANNING

Step 4: Data Exploration

User Profile Analysis

Age Distribution
The 25-44 bracket accounts for ~70% of all profiled users. The youth segment (16-24) is present but relatively small, while the 55+ market is almost untapped.

Geographic Distribution
Insight: Gauteng dominates ~70% of all profiled users. The youth segment (16-24) is present but relatively small, while the 55+ market is almost untapped.

Gender
Insight: This is a significant red flag — while the platform skews heavily male, or female users are not completing registration. Given that South Africa is ~51% female, this represents a major growth opportunity.

Viewership / Consumption Analysis

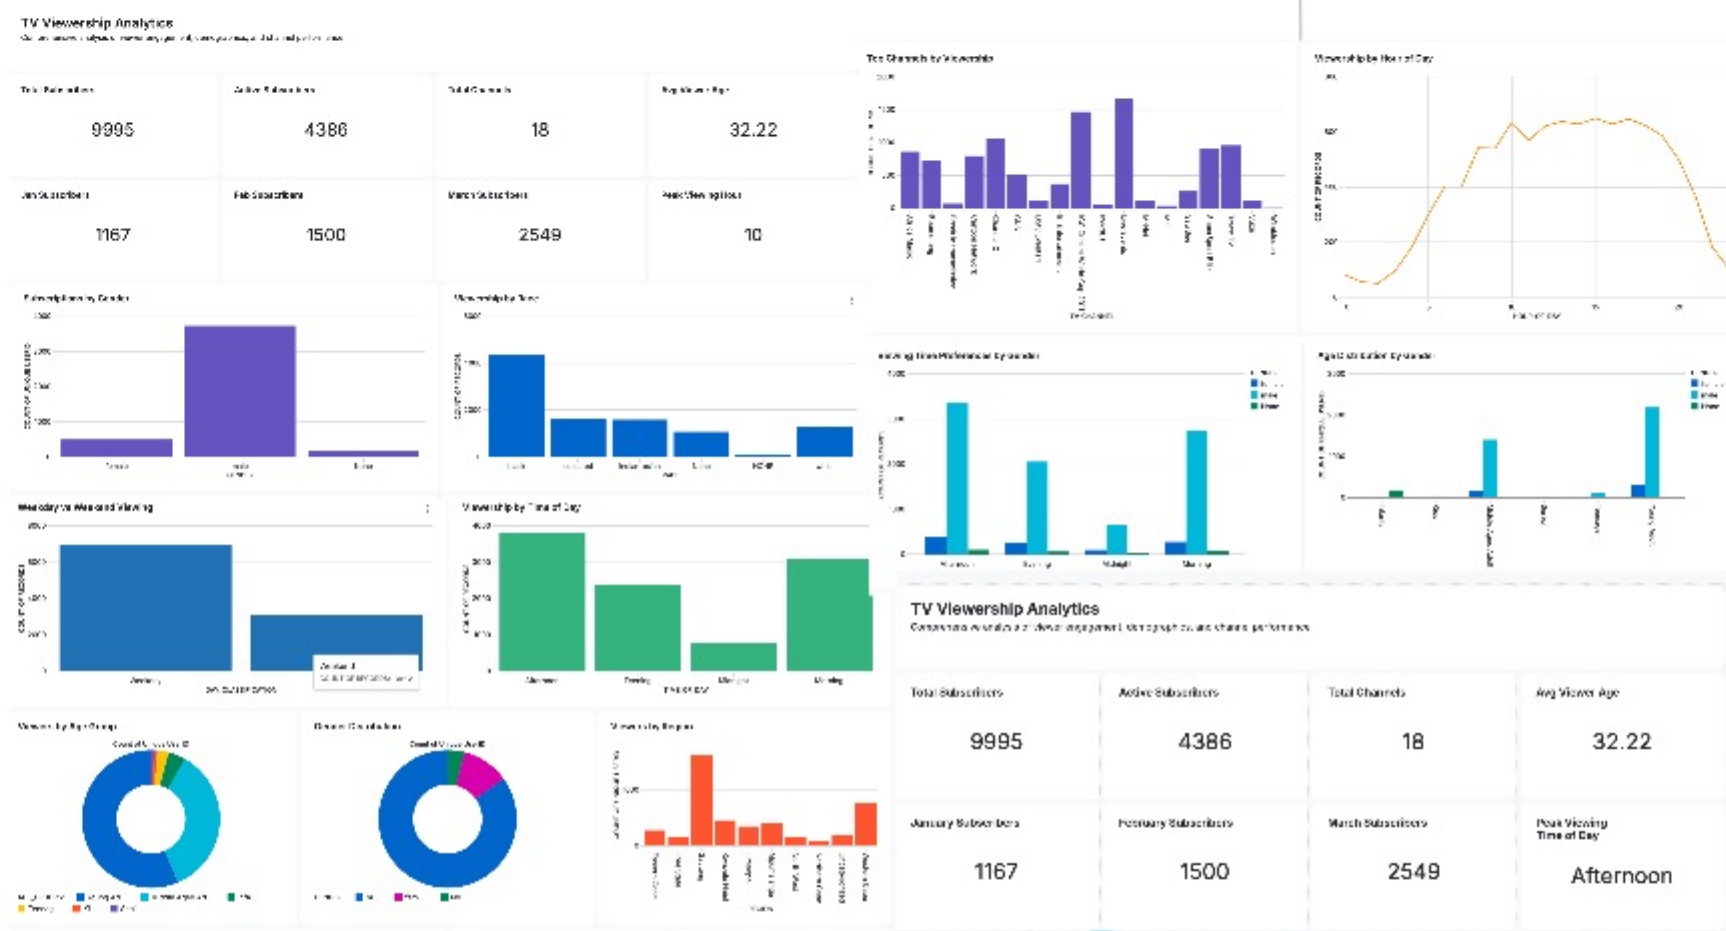

Sessions per week
Key Finding: Monday is the weekend day — 40% lower sessions than Friday and the shortest average session length (7.4 mins). Saturday has both the second highest session volume AND the highest average duration, making it the highest quality consumption day.

Hourly Patterns (SAST)
Peak hours (by volume): 17:00-20:00 SAST — aligns with after-work hours.
Highest quality (avg duration): 12:00-15:00 — afternoon viewers stay longest per session.
Overnight (00:00-06:00): Surprisingly high average duration (17 mins at 00:00, 12 mins at 06:00) — niche but committed audience, possibly students or shift workers.

Monthly Trend
Insight: Strong positive growth trajectory — platform is gaining momentum. March's jump likely driven by ICC Cricket World Cup 2011 replays/rewatches showing high viewership. The 110% growth from Jan-Mar is encouraging but needs to be validated against new subscriber acquisition data.

Top Channels by Total Watch Time
Insight: Sports dominates — ICC Cricket + SuperSport = 48.4% of all viewing minutes. Music channels (Channel O, Trace TV) are the #2 content category at 25.7%. Children's content (Cartoon Network + Boomerang) = 9.6% — a notable and loyal niche.

Step 5: Data Visualisation

Step 6: Feature Engineering

Based on the analysis, the following factors drive viewership:

- Sports Events** — Live and archived cricket/football drive the highest session volumes and durations. Seasonal effects (ICC tournament in data period) heavily inflate March numbers.
- Day of Week** — Weekdays (especially Fri) and Saturday outperform Monday significantly. Work-from-home or leisure scheduling drives patterns.
- Time of Day** — Afternoon and post-work evening (15:00-20:00 SAST) are peak windows. Content strategy should prioritise this window.
- Age Group** — 25-44 year olds are the core. 45-54 year olds watch the longest per session (10.9 mins avg), indicating deeper engagement despite smaller numbers.
- Province** — Gauteng leads in volume, but Free State users show the highest average session duration (11.2 mins — quality over quantity market).
- Content Genre** — Sports > Music > Kids > News > Entertainment (by watch time). Genre preferences should guide acquisition and scheduling decisions.
- Gender** — Male skewed viewership aligns with sports-heavy content. Female viewership is concentrated in E! Entertainment and Africa Magic, indicating clear genre preferences if targeted.

Step 7: Communicate Findings

Recommendations Summary

- Grow the User Base**
 - Female-first content campaign** — Invest in lifestyle, drama, and reality TV genres targeting women 25-44.
 - Provincial expansion** — Targeted marketing in KZN, Eastern Cape & Limpopo (currently underpenetrated vs population size).
 - Youth activation** — Shorter content formats, social media integration (Trace TV / Channel O leverage) for 16-24 audience.
 - Win-back dormant users** — Personalised re-engagement emails with curated content previews for the ~989 inactive profiles.
- Increase Consumption**
 - Monday content drops** — Exclusive Monday shows (reality/drama, music countdown, Monday sports highlights) to address the session gap.
 - Afternoon scheduling** — Double down on 12:00-17:00 slot where dwell time is highest.
 - Series binge strategy** — Africa Magic, M-Nel, and Vuzu should anchor serialized content to increase session depth.
 - Family viewing block** — 18:00-20:00 kids + family slot to capture the household unit, not just individual viewers.
